

ANNUAL REPORT OF KENONO FOUNDATION FOR THE YEAR 2025

Introduction

The year 2025 marked an important period of growth and consolidation for **Kenono Foundation**. Guided by its vision of strengthening community stewardship over land, forests, and livelihoods, the Foundation continued working with indigenous and forest-dependent communities to promote biodiversity conservation, climate resilience, and sustainable local economies. The name *Kenono*, meaning “*to support one another*,” reflects the belief that lasting conservation can only be achieved when communities themselves become custodians and beneficiaries of natural resource management.

During the year, the Foundation expanded its role from a field-based organisation to a facilitating institution connecting communities with policy processes, technical agencies, and markets. Interventions focused on four priorities: strengthening Community Conserved Areas (CCAs), promoting sustainable land use through restoration and afforestation, building nature-based livelihoods, and fostering environmental awareness among youth.

Through partnerships with national and international organisations, Kenono Foundation laid the groundwork for long-term climate and biodiversity initiatives, including carbon restoration, biodiversity corridor planning, and community-based ecotourism, while continuing close engagement with village institutions, churches, youth groups, and farmer collectives.

This report presents the key activities, achievements, and directions of Kenono Foundation for the year 2025.

1. Strengthening Community Biodiversity Conserved Areas (CCAs) in Nagaland

(a) During the year, Kenono Foundation strengthened a **broader coalition for community biodiversity conservation** through partnerships and memberships with various organisations and forums.

- (i) An MoU was signed with LEMSACHENLOK, an NGO based in Longleng working extensively in Eastern Nagaland, for collaboration on research, operational support, and policy advocacy to promote community-led biodiversity conservation.
- (ii) Kenono Foundation became a working group member of the Stewardship Alliance, led by LANDSTACK, to develop a common stewardship fund and collaboratively design climate action and biodiversity projects under the International Climate Initiative (IKI).

- (iii) The Chief Executive of Kenono Foundation was appointed as Chair of the National Working Group on Community Conserved Areas (NWG-CCA) for the term 2025–27, opening greater opportunities for collaboration, partnerships, and resource mobilisation.
- (iv) Kenono Foundation participated in state- and national-level workshops organised by the United Nations Development Programme (UNDP) to design the project titled “*Catalysing Optimum Management of Natural Heritage for Sustainability of Ecosystem, Resources and Viability of Endangered Wildlife Species (CONSERVE)*”. Kenono Foundation will serve as one of the field-level implementing agencies for Tseminyu district, enabling the development of a biodiversity corridor in the district.

(b) Forest Futures: Nagaland’s Path to Sustainable Land Use

- (i) An MoU was signed with Micro Energy Credit (MEC), Carbon Markets HQ, and LEMSACHENLOK to co-develop and pilot an Afforestation, Reforestation and Restoration (ARR) carbon credit project covering 30 hectares in 2026, implemented through two field partners. The MoU envisions scaling the ARR project to 10,000 hectares, with potential expansion to 30,000 hectares across Nagaland. This marks Kenono Foundation’s first formal carbon credit initiative.
- (ii) Another milestone MoU was signed with The Energy and Resources Institute (TERI) to undertake afforestation by planting approximately 160,000 native (keystone) tree species over 220 hectares in 2026. This initiative will establish model plantation sites and form the foundation for future community-based livelihood interventions.
- (iii) Both projects will be implemented across all seven ranges, based on Local Stakeholder Consultations and field surveys that identified approximately 3,800 hectares of potential afforestation land.

2. Terogvuthun Forest & Wildlife Conservation Initiative (TFWCI)

- (a) A joint consultation between the TFWCI Committee and Rengma Council staff was held at Mission Centre Zunpha for prayer and discussions on the status, challenges, common concerns, vision, and strategic direction of the initiative.
- (b) Rengma Council staff conducted special Sunday services and visitations to pray and raise awareness about the initiative at Kasha Daho and Tseminyu Lowjvu, covering Tseminyu BC, T. Zisunyu BC, Phenwenyu BC, Terogvunyu BC, and Kashanyu BC.

3. Integrated Livelihood Development: Detailed Project Reports (DPRs) for two livelihood and enterprise clusters—poultry and goat rearing—were developed during the reporting year.

4. Sendenyu Community Responsible Tourism Initiative (SCRTI)

(a) A landmark **Management Collaboration Agreement (MCA)** was signed between the Sendenyu Community and Kenono Foundation to develop responsible tourism and foster community biodiversity conservation. Under this agreement, Kenono Foundation will manage and develop the Sendenyu Ecotourism Centre, Nsonji Centenary Memorial Park, and education programmes for the Sendenyu Community Biodiversity and Wildlife Conservation Initiative.

(b) Kenono Foundation won the SBI Youth for India (YFI) Sahyog Competitive Pitch Fest and received a grant during the SBI Youth for India Conclave 2025. The selected project, ***“Eye of Tomorrow Initiative”***, aims to build a self-sustaining model for nature appreciation and education rooted in local conservation experiences under SCRTI. The project was officially inaugurated by Rev. Haiwalo Apon, Executive Secretary Rengma Council on 29th November 2025 during *Into the Wild: A Biodiversity Tour* with higher secondary school students of Tseminyu district.

(c) Minor renovation and repairs were carried out at the Sendenyu Ecotourism Centre, now renamed the **Sendenyu Community Biodiversity Centre**, including internal wiring, service connections, water connections, and installation of storage tanks.

(d) **Training and exposure visits** for youth and SHG members on responsible community tourism were conducted in Khonoma village with the Khonoma Community Tourism Management Committee.

(e) Kenono Foundation hosted the **NEN Farm School – Tseminyu Edition** at the Sendenyu Biodiversity Centre, a week-long agro-ecology programme attended by 19 youth participants representing nearly all ranges.

(f) Under SCRTI, 14 programmes on nature, biodiversity, tourism, and enterprise were curated and organised, reaching over 598 participants. In collaboration with the Sendenyu Youth Organisation (SYO), Kenono Foundation also co-organised the first open angling competition in Tseminyu district.

5. Long-Term Sustainability of Coffee Enterprise

(a) An MoU was signed with NABARD for the project *“Hills of Hope: Building a Sustainable Coffee Ecosystem in 10 Villages of Tseminyu District”*, scheduled to commence in 2026. The

project aims to establish a roasting unit and provide training and capacity building for coffee farmers.

(b) “*Kenono Coffee: From Our Hills to Your Cup*” was officially launched on World Coffee Day, 1st October 2025, marking a milestone in value chain development, market linkage, branding, and ecosystem strengthening since 2022.

(c) An MoU was signed with Mi Café on World Coffee Day to promote regional coffee, support product development (R&D), and enhance sales.

6. Community Forest Resource Rights (CFRR) in Western Rengma: A workshop on Community Forest Rights was conducted on 4th September 2025 at the WRBA Mission Centre, Zongpha, with members of the Board, RNPC, WRBA, and village leaders. The workshop resolved that RNPC would constitute a working committee, while Kenono Foundation—would provide hand-holding support for stepwise execution of CFRR in Western Rengma, Karbi Anglong. A pilot CFRR proposal will be undertaken before the next review meeting.

7. Western Rengma Plantation Project: Members of the Board visited the arecanut and lime plantations and expressed satisfaction with the growth rate. Annual jungle clearance was carried out under the supervision of the Administrator of Kesho Mission School.

Conclusion

The work undertaken in 2025 demonstrates that community-led conservation is both an environmental and development pathway, linking ecology, culture, and livelihoods. The Foundation made significant progress in biodiversity corridor planning, restoration initiatives, responsible tourism, coffee value-chain development, and youth environmental education, while strengthening trust with communities, church bodies, and traditional institutions.

At the same time, challenges such as climate change, forest degradation, and rural economic vulnerability remain substantial and require sustained engagement and institution-building.

In 2026, Kenono Foundation will prioritise implementation of afforestation and restoration programmes, operationalisation of the biodiversity corridor, expansion of livelihood enterprises, and environmental education under the *Eye of Tomorrow Initiative*. The Foundation remains committed to supporting communities as stewards of their natural heritage while ensuring conservation contributes to dignity, resilience, and well-being.

Kenono Foundation expresses sincere gratitude to its partners, community leaders, volunteers, and supporters whose cooperation made the year's work possible. Together, we continue the shared journey of caring for our land and supporting one another.

Action Plans for the Year 2026.

SL	Action Plan	Key Highlights
1	Strengthening Community through Biodiversity Conservation	(b) Resolution and declaration of Biodiversity Corridor in Tseminyu district linking community conserved areas and potential afforestation areas.
		(c) Mapping and management plan preparation of Terogvuthun Forest & Wildlife Conservation Initiative (TFWCI)
		(d) Nursery preparation and pilot of native tree plantation under Afforestation, Reforestation and Regeneration (ARR) Initiative in Tseminyu district and Eastern Nagaland.
		(e) Strengthen community networks and organizations in Nagaland for biodiversity conservation through capacity building, documentation and policy support.
2	Strengthening Community through Enterprise and livelihood	(a) Capacity building for homestays and eco-guides and develop basic activities and amenities for tourist.
		(b) Establish pilot units for development of livelihood clusters in Tseminyu district
		(c) Set up roasting facility, training and procurement of coffee with farmers/groups.
3	Sensitization and behavioral change on biodiversity conservation and single-use plastic.	(a) Partner with schools/institutions and churches to engage in hands on biodiversity education program under the 'Eyes of Tomorrow' Initiative.
		(b) Create behavioral awareness program on single-use plastic.
4	Western Rengma initiatives	(a) Facilitate the development of action plan for Community Forest Rights (CFR) in coordination with RNPC.
		(b) Monitoring of existing plantation projects.

ANNUAL REPORT OF KENONO FOUNDATION FOR THE YEAR 2024

Introduction

The year 2024 was a foundational year for **Kenono Foundation**, marked by the strengthening of community-based conservation systems and the establishment of long-term programmes linking biodiversity protection with local livelihoods. Guided by the belief that indigenous communities are the primary custodians of their natural heritage, the Foundation worked closely with village institutions, youth groups, and traditional bodies to promote sustainable management of forests and natural resources.

During the year, the Foundation focused on expanding Community Conserved Areas (CCAs), building community capacities, and introducing conservation-linked enterprises. Key milestones included documentation of conservation sites, the launch of the Sendenyu Biodiversity Education Experience Center, and the initiation of livelihood activities such as coffee enterprise development and sustainable farming support. Parallel efforts were also undertaken to explore restoration through afforestation and carbon initiatives, and to support the recognition of Community Forest Rights among the Western Rengma community.

This report presents the activities, achievements, and learnings of Kenono Foundation for the year 2024, and outlines the priorities for the coming year.

1. Strengthening Community Biodiversity Conservation

Plan vs Achievement: Kenono Foundation's flagship conservation initiative, the *Strengthening Community Biodiversity Conservation* project, has made notable strides in empowering local communities and enhancing their capacity for biodiversity management. The goal was to reach and support 10 villages across five districts in Nagaland, covering 7,000 hectares of community-conserved areas (CCAs).

- (a) **Achievement:** The project successfully reached 2,328 households (10,696 individuals) across 10 villages. These communities are actively involved in the conservation and management of CCAs, spanning a total landscape of 10,000–15,000 hectares.
- (b) In addition, we facilitated the community-driven documentation of 30 CCA sites, which will be incorporated into a dedicated CCA portal to enhance visibility and share knowledge.
- (c) Key activities included biodiversity and human-wildlife interaction monitoring, social equity assessments, and the development of management plans. These efforts highlighted

the presence of threatened species, emphasizing the role of CCAs in protecting biodiversity.

- (d) In addition, the CCA web portal was upgraded, featuring an analytics dashboard, biodiversity mapping tools, and a microsite for the Nagaland CCA Forum (NCCAF), which has become a critical resource for data-sharing and capacity building.
- (e) **Sendenyu Biodiversity Education Experience Center** was inaugurated on May 9, 2024, marking a significant milestone as Nagaland's first intergenerational hub dedicated to biodiversity education. The Sendenyu Youth Biodiversity Fest, held in conjunction with the launch, engaged 116 youth and children, building leadership skills and fostering a sense of ownership in conservation.
- (f) The foundation's collaboration with the Nagaland State Biodiversity Board (NSBB) has also strengthened conservation efforts through livelihood support for over 200 families, with interventions in poultry and fishery farming, funded by The International Climate Initiative (IKI).

2. Development of Conservation Enterprises

Plan vs Achievement: In 2024, the foundation also focused on developing conservation enterprises that align with both environmental sustainability and community livelihoods.

- (a) **ARR Carbon Credit - Forest Futures:** The *Afforestation, Reforestation, and Revegetation* (ARR) project in collaboration with local communities in Tseminyu and Longkhim Sub-Division is in the planning phase, with a feasibility study underway. This project will restore degraded lands and promote sustainable forestry solutions, addressing challenges posed by traditional Jhum cultivation and soil degradation. The long-term vision of the project aims to enhance forest cover, biodiversity, and community livelihoods through agroforestry and carbon credit generation.
- (b) **Coffee Enterprise:** The establishment of the coffee enterprise has been a standout success. In 2024, Kenono Foundation procured 1.5 tons of Arabica coffee from 14 villages, generating Rs. 3.4 lakhs in revenue for approximately 50 farmers. The launch of our coffee brand, *Tseminyu & Coffee: A Brewing Tango*, has been met with positive feedback. We have secured consistent buyers, including D Café Kohima and Mi Café Tseminyu, and the initiative has provided farmers with an assured market, instilling confidence in their work and its economic viability.
- (c) **Sendenyu Community Ecotourism:** The MoU for Sendenyu Community Ecotourism was initiated in April 2024 with a consultation meeting, outlining a shared vision for responsible ecotourism in the region. This partnership will create a sustainable model for ecotourism, generating income while promoting cultural heritage and environmental conservation. A draft agreement is currently under review by stakeholders.

3. Community Forest Rights (CFR) in Western Rengma, Assam

Plan vs Achievement: Kenono Foundation has actively engaged in supporting the Community Forest Rights (CFR) initiative for the Western Rengma in Assam, an effort that aims to secure indigenous forest-land and resource rights under the Indian Forest Rights Act (2006).

- (a) **Achievement:** The CFR meeting held on July 29, 2024, marked a pivotal step in fostering awareness and strategic planning for the Western Rengma community. The gathering focused on cultural preservation, documentation, and resource management. The formation of a coordination committee was resolved to ensure collaboration between Rengma communities in Assam and Nagaland.
- (b) Future actions will include organizing a seminar to raise further awareness on CFR and developing a comprehensive strategy for strengthening the community's claims. The foundation remains committed to advocating for the rights and legacy of the Western Rengma community, emphasizing cultural stewardship and unity.

4. Western Rengma Plantation Project

Plan vs Achievement: The Western Rengma Plantation Project made significant progress in 2024, particularly in the jungle clearing phase. The plantations of lime and areca nut are now in growth condition, setting the stage for future environmental and economic benefits for the region.

Conclusion

The work undertaken in 2024 laid important groundwork for long-term community-led conservation and sustainable livelihoods. The expansion of Community Conserved Areas, biodiversity documentation, and environmental education strengthened local stewardship, while initiatives in coffee enterprise, ecotourism planning, and livelihood support demonstrated the potential of conservation-linked economic opportunities.

Progress was also made toward securing Community Forest Rights and restoring degraded landscapes, highlighting the need to integrate ecological protection with social and cultural continuity. These efforts reaffirm that conservation is most effective when communities are empowered as partners and beneficiaries.

Building on these foundations, Kenono Foundation will move in 2025 toward scaling restoration initiatives, strengthening conservation enterprises, enhancing youth engagement, and supporting landscape-level planning such as biodiversity corridors. The Foundation expresses sincere

appreciation to partner organisations, community leaders, volunteers, and participating households whose cooperation and trust made the year's progress possible.

Kenono Foundation remains committed to working alongside communities to protect biodiversity while improving livelihoods, ensuring that conservation contributes to resilience, dignity, and shared well-being for future generations.

Action Plans for the year 2025

SL	Action Plans	Details	Outcome Indicator
B.1	Strengthening Community Biodiversity Conserved Areas (CCAs) in Nagaland	- Continue the project on strengthening CCAs in the state of Nagaland through field intervention, policy support and technology-documentation. - Field preparation and project development for 2,000 hectares of forest areas for Forest Futures: ARR-carbon credit project. - Under Tseminyu District Green Initiative: - Spearhead the creation of biodiversity corridor in Tseminyu district. - Comprehensive awareness and sensitization program on biodiversity conservation especially targeting children and youths, in church, schools and other platforms.	Increased capacities and behavioral change of the communities in terms of knowledge and awareness, skills and resources to conserve and protect their biodiversity conservation areas/ nature both at the village and landscape level.
B.2	Springshed Watershed project in Terogvuthun Forest & Wildlife Conservation Area (TFWCA)	Undertaken detailed planning and field preparation in coordination with the TFWCA committee.	Improved water availability by augmenting water in the conserved area and developing cooperation for efficient system of usage amongst various user groups.

B.3	Integrated Livelihood Development through Sustainable Livestock and Agriculture Practices (TDF)	• Baseline survey and beneficiary selection. • Training programs for livestock and agriculture activities.	• Improve livelihoods and income for households in Tseminyu district through sustainable livestock and agriculture, market linkages, and community capacity building.
B.3	Operationalize Sendenyu Community Ecotourism Center	• Initiate entry point activities for the management and development of the center. • Develop the skills and capacities of local team/community to adopt the project. • Design and pilot various packages for visitors and tourist.	• Higher center-based training capacity for CRBC on capacity building for church & community leadership development, biodiversity awareness & education. • Increased capacity for the community to sustain biodiversity conservation & leadership development, employment opportunities.
B.4	Develop the long-term sustainability of coffee enterprise under the project, 'Tseminyu and Coffee: A Brewing Tango'	• The plan aims to establish a sustainable Arabica coffee enterprise by setting up a roasting facility, training staff in quality roasting, and educating farmers on best harvest and processing practices. It includes sourcing sundried coffee and selling roasted products.	• Increased scope of higher revenue generation/ profit both for farmers and the project leading to upliftment of the rural economy through the development of agri-sector as a lucrative area of investment.
B.5	Community Forest Rights (CFR) in Western Rengma	• Facilitate the development and implementation of action plan for CFR in a forest corridor in coordination with RNPC.	• Secured ownership title of land and forest against threats of encroachment or displacement.
B.6	Western Rengma plantation project	• Monitoring and review of plantation site and projects as per sustainability plan.	• Increased resources for local mission support.

ANNUAL REPORT OF KENONO FOUNDATION FOR THE YEAR 2023

Introduction

The year 2023 marked the first full year of field implementation for **Kenono Foundation**. During this period, the organisation initiated its flagship project, *Strengthening Community Conserved Areas in Nagaland*, and began translating its vision of community stewardship of forests and livelihoods into practical action. The Foundation defined its operational presence across seven districts and established working relationships with communities, government institutions, and partner organisations.

A key development was the formation of the Tseminyu District Green Initiatives (TDGI), a multi-stakeholder platform that enabled collaboration between community institutions, the church, civil society organisations, and the Government on conservation and green development. Alongside conservation work, the Foundation also began exploring conservation-linked enterprises, including coffee value chain development and a biodiversity education-based ecotourism initiative.

The year therefore focused on building institutional systems, partnerships, and pilot interventions that would support long-term conservation and sustainable livelihoods. This report presents the major activities and achievements of Kenono Foundation during 2023 and outlines the direction for the coming year.

1. **Strengthening Community Conserved Areas in Nagaland project:** The first project under the Kenono Foundation on community conservation officially started on the ground in this reporting period. The project is supported by The Nature Conservancy, with Kalpavriksh, Kenono Foundation, LEMSACHENLOK and Strand Life Sciences as implementing partners. The goal of the project is to strengthen the ability of communities and organisations in Nagaland to protect and manage their forest. The project is for 4 years, from 2023 till 2027. This has enabled the Kenono Foundation to define its project area footprint in seven districts. Thus giving the organisation a rationale for its first geographic expansion outside the Tseminyu district, and later to venture into other external regions for '*business as mission*'. There are two major field components under this project:
 - (a) To develop pathways for enterprises to generate resources to support conservation in 3 community conservation landscapes i.e. Sendenyu- Phenshenyu- Tseminyu- Tesophenyu- Kasha daho (SPTK) in Tseminyu district, Angangba-YLK in Tuensang and Zunheboto district and Mt. Pauna range villages in Peren district have selected.

- (b) To develop capacity for community self-documenting through the portal in 20 forest sites (CCAs) in 7 districts to elevate the role of CCAs at the state and national level, and promote co-learning.
2. The development of a biodiversity education experience-based ecotourism project could be initiated in collaboration with Ground-up Conservation as the technical and resource partner.
3. **Tseminyu District Green Initiatives (TDGI):** The Council viz. Kenono Foundation has established a mechanism for the church to work with the Government and other frontal organisations/ NGOs on conservation and green initiatives through TDGI in our district. It is a multistakeholder body and was constituted through the Tseminyu District Development and Planning Board with the Council as the key partner at its formulation and vision-building stage. Likewise, the Council could cast its vision on green initiatives for the Rengma community through the TDGI vision document. Herewith, the Council will be a key implementation body alongside the government and other bodies for the initiative.
4. **Coffee value chain development project:** This project titled '*Tseminyu and Coffee: A Brewing Tango*' started in 2022 as a way to assess the value chain and provide proper market linkage for arabica coffee growers in the Tseminyu district. The goal is to develop successful enterprise models to sustain the economic lives of the people and biodiversity considering the forest ecosystem in the Tseminyu landscape. According to our survey and assessment report, there are over 200 farmers and 3.2 lacs coffee plants spread across the Tseminyu district. In this period, the value chain for coffee had been developed at several stages:
 - Coffee grower : Individuals and farmer groups/clubs
 - Procurement : Zunpha MPCs Ltd.
 - Supplier : Kenono Foundation
 - Buyer and roasting : Blue Tokai Coffee Roasters & D'CafeWe could procure samples from 24 coffee farmers of Sendenyu, Kithagha and K. Station for sample quality testing. Likewise, the test results of all the samples came out very positive indicating a premium quality level. However, since only the Sendenyu area could supply in bulk, we could supply our buyers from that region only. Herewith, the first roasted coffee as 'Sendenyu Estate' was developed from the project, which was also launched during Hornbill by D'Cafe and Blue Tokai. Currently, D'Cafe and Blue Tokai sell roasted coffee from the project in their stores and cafes.
5. **Sustainability plan for fruit plantation in the western Rengma project site:** Given the rapid growth of weed and jungle in Western Rengma project site, and in order to ensure the fast and proper growth of plants we have worked out a three-time jungle clearing cycle for 1,500 areca

nut plants planted in Jongpha, Western Rengma and identified a reliable worker on wages basis to oversee the plantation project as part of the sustainability plan. However, in this reporting period, we have done only one jungle clearing cycle. In the upcoming year, we will ensure the complete jungle clearing cycle.

Conclusion

The activities undertaken in 2023 established the foundation for Kenono Foundation's long-term work in community-led conservation and rural development. The launch of the Community Conserved Areas project, expansion into multiple districts, and collaboration with partners demonstrated the feasibility of strengthening conservation through community participation. Initiatives such as the coffee value chain, ecotourism planning, and the Tseminyu District Green Initiatives illustrated how livelihoods, institutions, and environmental stewardship can be developed together.

While much of the work during the year focused on institution-building and pilot implementation, it created important learning and confidence among communities and partners. The Foundation also began supporting sustainability measures, including plantation management and early steps toward community forest rights.

Moving forward into 2024, Kenono Foundation will prioritise strengthening community capacities, expanding conservation enterprises, and deepening partnerships with government and civil society. The Foundation expresses its sincere appreciation to community leaders, partner organisations, volunteers, and supporters whose cooperation made this initial year of work possible.

Kenono Foundation remains committed to supporting communities in protecting their natural heritage while building sustainable livelihoods, ensuring that conservation contributes to resilience and shared well-being for future generations.

Action Plan for the Year 2024

The strategic action plans under for the year 2024 are as follows:

SL	Action Plan	Details	Output/ Outcome
B.1	Strengthening Community Biodiversity Conservation	Nagaland Community Conserved Area (CCA) Project via field intervention, technology & policy support - 20 CCAs in approx 70 villages - Tseminyu District Green Initiatives on conservation, plantation & waste management.	- Strengthen the ability of communities and organisations in Nagaland to protect and manage their Community Conserved Areas (CCAs).
B.2	Development of Conservation Enterprises	1. MoU with Sendenyu Community Ecotourism Board- SCEB for the development & management of a responsible ecotourism & biodiversity centre. 2. Coffee enterprise development: Exposure, training & capacity building, trading, DPR for post-harvest primary processing unit. 3. Carbon Credit REDD+ project development in Sendenyu, Phenshenyu, Tseminyu, and Kasha Daho, Tesophenyu range.	- A centre is developed for biodiversity learning, community capacity building & training. - Viable enterprise models are developed to support biodiversity conservation work and sustainability in the rural economy. - Revenue generation mechanisms are developed to support and strengthen biodiversity conservation and community development.
B.3	Community Forest Rights (CFR) in Western Rengma, Assam	1. Development of model a CFR proposal for one village unit. 2. Training and capacity building of field team and community leaders 3. Development of DPR for CFR in Western Rengma Area, Assam.	- Land title viz. forest is secured for indigenous community members of Western Rengma.
B.4	Western Rengma Plantation Project	In situ SWC Management, Gap filling and monitoring of plantation site.	The high survival rates of plants are ensured.
